

# Daily Schedule & Course Description

9:30-10:30

Hands-on  
Learning

This is a time for creativity, discovery, and joyful exploration. During this period, students follow their curiosity as they engage in a variety of choice-based activities designed to inspire imagination and connection. Whether building with natural and crafted materials, creating art, playing cooperative games, or working together on creative projects, students learn best by doing.

10:30-11:30

Social  
Studies

In this engaging, project-based class, students will explore the lives of influential individuals and events that helped shape our world. Through a rich blend of literature, hands-on experiences, creative projects, and STEM activities history comes to life in meaningful and memorable ways.

12:30-1:00

Art

A fun and engaging art experience inspired by the beauty of Missouri's changing seasons! Students will create seasonal projects using a variety of materials, including natural elements like leaves, flowers, and more. This hands-on class encourages creativity, exploration, and a love for both art and nature.

1:00-2:00

Science

Missouri's Seasons in Motion! Science isn't just in a book—it's under every rock, inside every creek, and in the very air we breathe. In this hands-on STEM course, students become field researchers in their own backyard. We use the Missouri landscape as a dynamic laboratory, where the curriculum is dictated by the changing seasons of the Midwest.

2:00-3:00

Exploration

What happens when you let kids just be kids? They thrive. This course is dedicated to "wild and free" play in its purest form. Students have full agency to choose their own adventure: exploring the woods, splashing in the creek, or tending to farm animals. This is a screen-free, agenda-free time designed to lower stress and spark the natural curiosity that lives in every child. It's not just a break—it's where the most important learning happens.
